

Managing thousands of IT assets within hospital organizations – medical devices, IT desktops, laptops, mobile devices, servers, network devices, to software, contracts, and maintenance agreements – is a difficult task. Healthcare environments are too complex to manage with traditional spreadsheet, manual approach.

- **Capital and rental equipment:** Time consuming, labor intensive, error prone manual processes to manage assets
- **Hardware IT maintenance contracts:** Potential for wasted money by not ensuring warranties are being fully utilized, there are no duplicate coverage and no lapses in coverage
- **Software license agreements:** Risk avoidance of software vendor fines for violation of agreements or cost savings for under utilization of corporate license
- **Medical equipment:** Minimize time to locate portable equipment when needed and avoid higher inventory cost than necessary

Data Vista has the resources to address the above issues by providing a comprehensive, life cycle portfolio of hospital asset management services, ***HospitalAssetCare***.

HospitalAssetCare provides a lifecycle approach to asset management.

Initially, hospital assets are identified, categorized, and recorded for critical asset inventory data.

- **Automated asset data collection of network connected assets**
- **Manual, bar coding entry for non-networked assets**
- **Entry of information for software licenses**
- **Proprietary software to track and manage hospital assets .**

Ongoing ***HospitalAssetCare*** includes:

- **Preventive maintenance**
- **Break/Fix reactive maintenance services**

To complete the life cycle, ***HospitalAssetCare*** offers...

- **Onsite/offsite data destruction to meet HIPPA and HITRUST requirements, NIST, and DoD standards**
- **Certified environmental disposal in compliance R2 and ISO 14001 standards**
