

# Resource Management

Data Vista offers a large portfolio of technical resources to meet its customers' resource management demands.

- Capabilities
- Value Realization
- Risk Management
- Resource Management
- Performance Reporting

## Customer Resource Management Goals

At Data Vista, we know how important it is that our customers' resource management goals are observed and met every day. That's why we offer extensive, expert services to provide quality IT resources including:

- Trained personnel available to develop and facilitate the maintenance and management of IT infrastructure.
- Gap analyses to determine shortfalls against requirements and ensure your business and IT resources (people, application, information, infrastructure) are able to meet objectives.
- IT assets managed and protected throughout their economic life cycle to support cost-effective achievement of business objectives.

## How Data Vista Supports Resource Management Goals

We offer a wide range of resource management services to meet any and all customer expectations. With such a variety of resources, we are able to respond quickly and efficiently to each of our customers' requests. As a Data Vista customer, you can have peace of mind knowing we provide:

- Full-service, technology life cycle products and services to meet any variety of requirements and extend the economic life of technology and preserve IT investments.
- Extensive technical and project management resources to support cost effective outsourcing requirements.
- A wide range of flexibility to address monthly maintenance contract requirements, project-based fixed fee activities, or single transaction T&M requests.
- Nationwide and international capabilities to address gaps in locations, product support, and fluctuations in workloads.
- Accountable, responsible and dependable provider of resource services that achieve cost savings, without compromising their quality of service.
